Profil

I am a final (third-year) engineering student at Grenoble INP - Ensimag, passionate about mathematics, technology and critical thinking. I am looking for a position as an AI | ML | Software Engineer & Data Scientist where I can apply my skills and contribute to high-impact projects.

Work Experiences

AI Pentesting Research Engineer Intern

(Groupe) Astek

Development of an AI-based Pentesting agent using Reinforcement Learning.

April 2026 - September 2026

Île-de-France, France

NLP/ASR Research Engineer Intern

Laboratoire d'Informatique de Grenoble (LIG)

Evaluation of the WhisperX ASR Model's Performance in Transcribing Various French Accents Using Different Metrics and Implementation of a Transcription Fusion Algorithm.

February 2026 - April 2026

Grenoble, France

Data Engineer Intern

Orange Côte d'Ivoire

Analysis of a specific part of the database infrastructure to address various business challenges and extract actionable insights.

Juin 2023 - Août 2023

Abidjan, Côte d'Ivoire

Education

Engineering Degree in Computer Science — Grenoble INP - Ensimag

2023 - 2026

Master of Artificial Intelligence — Grenoble INP - Ensimag & UGA

2025 - 2026

Bachelor of Science — Grenoble INP - Ensimag

2023 - 2024

Preparatory Classes for the Grandes Écoles — Lycée Français Blaise Pascal d'Abidjan

2021 - 2023

High School Scientific Diploma — Lycée Scientifique de Yamoussoukro

2020 - 2021

Competences

Programming Languages Python, Java, C++, C, SQL, Bash, Cuda, R

ML / IA / Data PyTorch, Scikit-learn, NLP, Speech Recognition, Computer Vision, Generative AI, RAG, LangChain, Supervised et Unsupervised Learning, Reinforcement Learning, Spark

DevOps / Tools Git, GitLab, GitHub, CI/CD, Docker, Linux(Bash), Windows, HTML, JavaScript, CSS

Languages French(Native), English (B2), Spanish(A2).

Projects

Artificial Intelligence Personal Projects

2025

Several small AI projects completed over the summer: classification, detection, denoising, text generation, etc. The code is available on GitHub, and some of these small projects are still being improved.

Algorithm Project

Ensimag 2nd Year – 2025

Creation of an AI using algorithms such as Min-Max and Alpha-Beta, capable of playing the game Blobwar (in C++).

Data Base Project

Ensimag 2nd Year – 2024

Creation of a database based on a set of specifications to address the client's needs. This required expertise in database management systems (DBMS) as well as the implementation of SQL queries.

Java Project

Ensimag 2nd Year – 2024

Implementation of a firefighter event game in Java.

Graphical User Interface Project

Ensimag 1st Year – 2024

Building a graphical user interface using C.

Hobbies

Basketball · Football · Music · Cinema · Chess · Strategy Games · Video Games
